INSTALL GUIDE

PRESETS & PROFILES FOR LIGHTROOM

[SOMBRAPRESETS.COM](https://sombrapresets.com)

Hi, I'm Cesar.

Thank you so much for picking up a Sombra pack and for supporting my work! This guide works for every pack in my shop, so whichever looks you got, you're in the right place. Setup only takes a couple of minutes.

What's in your download

Presets (.xmp)	One-click looks that set your editing sliders. Most packs are presets.
Profiles (.xmp)	Film simulations that set the base color. You can still edit on top of them. Some packs include these instead of presets.
This guide	Keep it handy in case you set up Lightroom on another device later.

1 Download and unzip

Bought on Etsy? Download from a browser, since the Etsy app can't download files. Open [etsy.com](https://www.etsy.com), go to **Purchases and reviews**, and tap **Download files** next to your order.

Bought somewhere else? Use the download link in your receipt email.

Unzip it. On a computer, double-click the .zip. On iPhone, tap it in the Files app. On Android, open it in your Files app and choose Extract.

Lightroom can usually import the .zip as is too, so if unzipping gives you trouble, skip it.

2 Install in your Lightroom

Pick the app you use. Presets and profiles install the same way.

Lightroom on your phone

FREE APP · IPHONE, IPAD, ANDROID

1. Open any photo in Lightroom.
2. Tap **Presets** in the editing tools at the bottom.
3. Tap the three dots (•••) and choose **Import Presets**.
4. Select the .zip or the .xmp files.
Done!

Lightroom on desktop

MAC OR WINDOWS

1. Go to **File** → **Import Profiles & Presets**.
2. Select the .zip or the .xmp files and click **Import**.

Signed in with the same Adobe account on your phone? They'll sync there too.

Lightroom Classic

MAC OR WINDOWS

1. Go to **File** → **Import Develop Profiles and Presets**.
2. Select the .zip or the .xmp files and click **Import**.
3. Find them in the **Presets** panel on the left side of the Develop module.

Photoshop (Camera Raw)

MAC OR WINDOWS

1. Open a photo in Camera Raw.
2. Click the **Presets** icon on the right side.
3. Click the three dots (•••), choose **Import Profiles & Presets**, and select the files.

3 Make them yours

Presets

Open a photo, find the pack's name in your Presets list, and try a few looks. Each one is made for different light.

Then adjust. Every photo is different, so a quick nudge to **Exposure** and **White Balance** usually gets you there. Newer versions of Lightroom also have an **Amount** slider to turn a look up or down.

Profiles

Open the **Profile Browser** (the four-square icon at the top of the Edit or Basic panel) and pick a film simulation.

Use the **Amount** slider, 0 to 200, to set how strong it is. Then edit on top like you normally would.

Editing a whole day of photos? Get one looking right, then copy and paste those settings onto the rest. It keeps a set looking consistent.

IF SOMETHING'S NOT WORKING

I can't find my download.

On Etsy, open etsy.com in a browser (the app doesn't do downloads) and go to Purchases and reviews. Anywhere else, check your receipt email.

I imported them, but they don't show up.

Lightroom sometimes hides presets it thinks won't fully fit a photo. In the Presets panel, open the three dots menu and turn off **Hide Partially Compatible Presets**. In Classic, it's under Preferences → Presets.

The look is too strong, or different from the examples.

That's normal, since every photo starts from different light. Lower the Amount or adjust Exposure and White Balance. Presets look best on RAW photos but work on phone photos too.

Still stuck? I'm here to help!

Your order	Message me wherever you bought. I reply fast!
